

Arctic and Antarctic projects

Hi!

I have been working project based all my life, making lots of experiences. Managing small and big projects as well as companies. I like to continue to learn myself, as well as teach others, and will continue with that all my life. Working a month on Antarctic ship Sarmiento de Gamboa gave me the desire to do more Polar work.

A short description of experience that might relate to Antarctic work:

Working at sea in big ships to small boats with technology like ROV, cameras, computers.
Working at sea building routines for surface and subsea works.
Experience as Offshore Manager in multiple projects on small and big ships.
Holding lectures and manage project communication.
Ocean science on remote islands, involving diving down to minus 10 C.
Own, build and handle RIB boats and people in that environment.
Maneuver boats and manage divers to dive sites, manage safety diveplanning.
Expeditions in winter mountains, ice- and rock climbing, living in alpine terrain for weeks.
I am solution oriented; how to reach the goal?

More in a list form

Master Mariner STCW VIII for small ships, to 15 meters, Chalmers University
Chief engineer STCW VIII for small ships, up to 1 000 hp Chalmers University
Basic safety STCW worldwide, firefighting, smoke diving etc in remote areas
Medical Certificate valid worldwide, Seamans book
Driver's license for cars, trucks, forklifts, wheel loaders
Owner of my own professional workboat
Part owner 7,5 meter RIB diveboat with dual outboard engines, including maintenance
Education Ocean Science, Gothenburg university
Education basic Marine Biology, Gothenburg University
Ocean science work on islands for 30 years
Diving and filming under water for over 30 years
Manage diving, do safety diveplanning and be divemanager
Skiing in remote alpine areas and on glaciers for weeks
Avalanche education and alpine survival
Ice climbing, Rock climbing education and practice
Multi engineer, mechanics, electronic, piping, control systems etc
IT, hard and software
Making cooperation between technical and non technical people work
Ocean sciences, making and using different technologies
Used to working on remote island and ships, work with what you have on hand
Own and work with small and large ROV systems, also aerial drones
